### Abstract

This paper dedicated to define for the first time the concept of complex refined neutrosophic numbers as a direct application of refined neutrosophic sets and as a new generalization of neutrosophic complex numbers. Also, it presents some of their elementary properties such as, conjugates, absolute values, invertibility, and algebraic operations. The importance of the definitions in this article lies in the use of them by defining the polar form of the refined neutrosophic complex numbers.

**Keywords:** Refined neutrosophic complex number, refined neutrosophic real number, invertible number.

### 1. Introduction

Neutrosophy is a new branch of philosophy founded by Smarandache [6,36], to study the indeterminacy in the real world problems and science. It has a master effect in many areas such as topology [7,27,29], equations [3,30], decision making [8], abstract algebra [25,26,39,41], and number theory [35].

Neutrosophic algebra began with the definitions of neutrosophic groups [9,17], and rings [13]. The neutrosophic rings and their generalizations such as refined neutrosophic rings [19], and n-refined neutrosophic rings [11,12], were very useful in the study of neutrosophic algebraic structures.

Neutrosophic algebraic structures were defined as new generalizations of classical ones based on neutrosophic rings and fields, where we find many concepts from linear algebra were generalized into neutrosophic systems such as neutrosophic matrices and spaces over neutrosophic fields [1,42], refined neutrosophic spaces and matrices over refined neutrosophic fields [24], n-refined neutrosophic spaces over n-refined neutrosophic fields [21,32], linear modules and ideals [4,5,20,22].

Neutrosophic complex numbers were firstly studied in [43]. Recently, many of their properties were discussed in [44], especially their invertibility, absolute values, and complex functions.

Through this paper, we define refined neutrosophic complex numbers for the first time. On the other hand, we study many related properties of these numbers such as the invertibles, conjugates, and absolute values.

## 2. Neutrosophic complex number

### Definition 2.1. Neutrosophic Real Number:

Suppose that  $w$  is a neutrosophic number, then it takes the following standard form:  $w = a + bI$  where  $a, b$  are real coefficients, and  $I$  represents the indeterminacy, where  $0.I = 0$  and  $I^n = I$  for all positive integers  $n$ .

For example:

$$w = 1 + 2I, w = 3 = 3 + 0I.$$

### Definition 2.2. Neutrosophic Complex Number:

Suppose that  $z$  is a neutrosophic complex number, then it takes the following standard form:  $z = a + bI + i(c + dI)$  where  $a, b, c, d$  are real coefficients, and  $I$  is the indeterminacy element, where  $i^2 = -1$  i.e.  $i = \sqrt{-1}$ .

We recall  $a + bI$  the real part, then it takes the following standard form  $Re(z) = a + bI$ .

We recall  $c + dI$  the imagine part, then it takes the following standard form  $Im(z) = c + dI$ .

For example:

$$z = 4 + I + i(2 + 2I)$$

Note: we can say that any real number can be considered a neutrosophic number.

For example:  $z = 3 = 3 + 0.I + i(0 + 0.I)$

### Definition 2.3. Division of neutrosophic real numbers:

Suppose that  $w_1, w_2$  are two neutrosophic number, where

$$w_1 = a_1 + b_1I, w_2 = a_2 + b_2I$$

Then:

$$\frac{w_1}{w_2} = \frac{a_1 + b_1I}{a_2 + b_2I} = \frac{a_1}{a_2} + \frac{a_2b_1 - a_1b_2}{a_2(a_2 + b_2)}I$$

## 3. Refined neutrosophic complex numbers.

### Definition 3.1.

We define a refine neutrosophic complex number by the following form:

$z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ , where  $a_0, a_1, a_2, b_0, b_1, b_2$  are real coefficients. For example:

$$z = (1 - I_1 + 2I_2) + i(3 + 2I_1 - I_2).$$

We recall  $a_0 + a_1I_1 + a_2I_2$  the real part, then it takes the following standard form  $Re(z) = a_0 + a_1I_1 + a_2I_2$ .

We recall  $b_0 + b_1I_1 + b_2I_2$  the imagine part, then it takes the following standard form  $Im(z) = b_0 + b_1I_1 + b_2I_2$ .

**Remark 3.1.** A refined neutrosophic complex number can be defined as follows:

$z = a + bI_1 + cI_2$  where  $a, b, c$  are complex number. For example:

$$z = (1 - i) + (2 + i)I_1 + (3 - 2i)I_2.$$

**Remark 3.2.**

$$I_1 \cdot I_1 = I_1, I_1 \cdot I_2 = I_1, I_2 \cdot I_2 = I_2.$$

**Definition 3.2. The conjugate of a refined neutrosophic complex number:**

Let  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$  a refined neutrosophic complex number. We denote the conjugate of a refined neutrosophic complex number by  $\bar{z}$  and define it by the following form:

$$\bar{z} = (a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)$$

For example:

$$z = (-1 + I_1 + 2I_2) + i(1 + 2I_1 - I_2), \text{ Then } \bar{z} = (-1 + I_1 + 2I_2) - i(1 + 2I_1 - I_2).$$

**Definition 3.3.** The absolute value of a refined neutrosophic complex number:

Suppose that  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$  is a refined neutrosophic complex number. The absolute value of a  $z$  can be defined by the following form:

$$|z| = \sqrt{(a_0 + a_1I_1 + a_2I_2)^2 + (b_0 + b_1I_1 + b_2I_2)^2}$$

**Remark 3.3.**

$$(1). \overline{(\bar{z})} = z.$$

Proof: Let  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ , then  $\bar{z} = (a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)$ .

Now.

$$\overline{(\bar{z})} = \overline{((a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2))} = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2) = z$$

$$(2). z + \bar{z} = 2Re(z)$$

Proof: Let  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ , then  $\bar{z} = (a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)$ .

Now.

$$z + \bar{z} = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2) + (a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)$$

$$z + \bar{z} = 2[(a_0 + a_1I_1 + a_2I_2)] = 2Re(z)$$

$$(3). z - \bar{z} = 2Im(z)$$

Proof:

Let  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ , then  $\bar{z} = (a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)$ .

Now.

$$z - \bar{z} = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2) - [(a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)]$$

$$z - \bar{z} = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2) - (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$$

$$z - \bar{z} = 2i(b_0 + b_1I_1 + b_2I_2) = 2Im(z)$$

$$(4). \overline{z_1 + z_2} = \bar{z}_1 + \bar{z}_2$$

Proof:

$$\text{Let } z_1 = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2), z_2 = (c_0 + c_1I_1 + c_2I_2) + i(d_0 + d_1I_1 + d_2I_2).$$

Now.

$$z_1 + z_2 = [(a_0 + c_0) + (a_1 + c_1)I_1 + (a_2 + c_2)I_2] + i[(b_0 + d_0) + (b_1 + d_1)I_1 + (b_2 + d_2)I_2]$$

Then.

$$\overline{z_1 + z_2} = [(a_0 + c_0) + (a_1 + c_1)I_1 + (a_2 + c_2)I_2] - i[(b_0 + d_0) + (b_1 + d_1)I_1 + (b_2 + d_2)I_2]$$

$$\overline{z_1 + z_2} = [(a_0 + a_1I_1 + a_2I_2) - i(b_0 + b_1I_1 + b_2I_2)] + [(c_0 + c_1I_1 + c_2I_2) - i(d_0 + d_1I_1 + d_2I_2)] = \bar{z}_1 + \bar{z}_2$$

$$(5). \quad |z| = \left( \sqrt{a_0^2 + b_0^2} \right) + I_1 \left( \sqrt{(a_0 + a_1 + a_2)^2 + (b_0 + b_1 + b_2)^2} - \sqrt{(a_0 + a_2)^2 + (b_0 + b_2)^2} \right) + I_2 \left( \sqrt{(a_0 + a_2)^2 + (b_0 + b_2)^2} - \sqrt{a_0^2 + b_0^2} \right) = \alpha.$$

Proof:

We compute the square of the right side as follows:

$$\alpha^2 = (a_0^2 + b_0^2) + I_1(-[(a_0 + a_2)^2 + (b_0 + b_2)^2] + (a_0 + a_1 + a_2)^2 + (b_0 + b_1 + b_2)^2) + I_2(-[a_0^2 + b_0^2] + (a_0 + a_2)^2 + (b_0 + b_2)^2) =$$

$$(a_0 + a_1I_1 + a_2I_2)^2 + (b_0 + b_1I_1 + b_2I_2)^2 = |z|^2.$$

**Definition 3.4.** The multiplication of two refined neutrosophic real numbers:

Let  $w_1 = a_0 + a_1I_1 + a_2I_2, w_2 = b_0 + b_1I_1 + b_2I_2$  are two refined neutrosophic real number, and we put:

$$N_0 = a_0, N_j = a_0 + a_j + a_{j+1} + \dots + a_n; 1 \leq j \leq n$$

$$M_0 = b_0, M_j = b_0 + b_1I_1 + b_2I_2 + \dots + b_nI_n; 1 \leq j \leq n$$

We have.

$$N_0 = a_0, N_1 = a_0 + a_1 + a_2, N_2 = a_0 + a_2$$

$$M_0 = b_0, M_1 = b_0 + b_1 + b_2, M_2 = b_0 + b_2$$

Then a product  $w_1 \cdot w_2$  is defined by form:

$$w_1 \cdot w_2 = N_0M_0 + [N_1M_1 - N_2M_2]I_1 + [N_2M_2 - N_0M_0]I_2$$

**Remark 3.4.** The definition of product can be useful in refined neutrosophic rings. See reference [19].

**Definition 3.5.** The multiplication of two refined neutrosophic complex numbers:

Let  $z_1 = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ ,  $z_2 = (c_0 + c_1I_1 + c_2I_2) + i(d_0 + d_1I_1 + d_2I_2)$ .

A product  $z_1 \cdot z_2$  is defined by form:

$$z_1 \cdot z_2 = [(a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)][(c_0 + c_1I_1 + c_2I_2) + i(d_0 + d_1I_1 + d_2I_2)]$$

$$z_1 \cdot z_2 = (a_0 + a_1I_1 + a_2I_2)(c_0 + c_1I_1 + c_2I_2) - (b_0 + b_1I_1 + b_2I_2)(d_0 + d_1I_1 + d_2I_2) \\ + i[(a_0 + a_1I_1 + a_2I_2)(d_0 + d_1I_1 + d_2I_2) + (c_0 + c_1I_1 + c_2I_2)(b_0 + b_1I_1 + b_2I_2)]$$

By using Definition 3.4, we get the product  $z_1 \cdot z_2$ .

**Remark 3.5.**

$$(1). \overline{z_1 \cdot z_2} = \overline{z_1} \cdot \overline{z_2}$$

$$(1). z \cdot \bar{z} = |z|^2.$$

**Definition 3.6.** Let  $w = a_0 + a_1I_1 + a_2I_2$  be a refined neutrosophic real number, then the invertible of  $w$  defined as follows:

$$w^{-1} = \frac{1}{w} = \frac{1}{a_0 + a_1I_1 + a_2I_2} = (a_0 + a_1I_1 + a_2I_2)^{-1}$$

$$\frac{1}{w} = (a_0)^{-1} + [(a_0 + a_1 + a_2)^{-1} - (a_0 + a_2)^{-1}]I_1 + [(a_0 + a_2)^{-1} - (a_0)^{-1}]I_2$$

Where  $a_0 + a_1 + a_2, a_0 + a_2, a_0$  are not zero elements.

**Definition 3.7.** The invertible a refined neutrosophic complex number.

Let  $z = (a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)$ , then the invertible of  $z$  defined as follows:

$$z^{-1} = \frac{1}{z} = \frac{1}{(a_0 + a_1I_1 + a_2I_2) + i(b_0 + b_1I_1 + b_2I_2)} = \frac{\bar{z}}{z \cdot \bar{z}} = \frac{\bar{z}}{|z|^2}$$

**Example 3.1.** Let  $z = (1 + I_1 - I_2) + i(2 + 2I_1 - I_2)$ ,  $\bar{z} = (1 + I_1 - I_2) - i(2 + 2I_1 - I_2)$ .

then.

$$z^{-1} = \frac{\bar{z}}{|z|^2} = \frac{(1 + I_1 - I_2) - i(2 + 2I_1 - I_2)}{(1 + I_1 - I_2)^2 + (2 + 2I_1 - I_2)^2} = \frac{(1 + I_1 - I_2) - i(2 + 2I_1 - I_2)}{5 + 9I_1 - 5I_2}$$

$$z^{-1} = (1 + I_1 - I_2) - i(2 + 2I_1 - I_2)(5 + 9I_1 - 5I_2)^{-1}$$

$$z^{-1} = (1 + I_1 - I_2)(5 + 9I_1 - 5I_2)^{-1} - i(2 + 2I_1 - I_2)(5 + 9I_1 - 5I_2)^{-1}$$

$$z^{-1} = (1 + I_1 - I_2)\left(\frac{1}{5} + \frac{1}{9}I_1 - \frac{1}{5}I_2\right) - i(2 + 2I_1 - I_2)\left(\frac{1}{5} + \frac{1}{9}I_1 - \frac{1}{5}I_2\right)$$

By using the Definition 3.4 we get:

$$(1 + I_1 - I_2)\left(\frac{1}{5} + \frac{1}{9}I_1 - \frac{1}{5}I_2\right) = \frac{1}{5} + \frac{1}{5}I_1 - \frac{1}{5}I_2$$

$$(2 + 2I_1 - I_2)\left(\frac{1}{5} + \frac{1}{9}I_1 - \frac{1}{5}I_2\right) = \frac{2}{5} + \frac{3}{9}I_1 - \frac{2}{5}I_2$$

Hence,

$$z^{-1} = \left(\frac{1}{5} + \frac{1}{5}I_1 - \frac{1}{5}I_2\right) - i\left(\frac{2}{5} + \frac{3}{9}I_1 - \frac{2}{5}I_2\right).$$

The condition of invertibility can be found in [41].

### Remark 3.6.

A refined neutrosophic number  $(a_o + a_1I_1 + a_2I_2)$  can be written as  $a_o + a_1I_1 + a_2I_2$ .

### 3. Conclusion

In this paper, we have defined for the first time the concept of refined neutrosophic complex numbers. Also, we have discussed some of their elementary properties such as the conjugate, the multiplication, absolute values and other related topics.

As a future research direction, we aim to study the natural generalization of those numbers by n-refined neutrosophic complex numbers.
